## South Africa's Leading Splunk and Cribl Specialists

We're The 42 Company – certified and seasoned data engineering specialists with second-to-none competence in Splunk and Cribl technologies.

We help you implement these powerful platforms to collect and analyze your realtime data, so you can discover what's happening in your business and take meaningful action quickly.

Whether you're a large enterprise that indexes multiple terabytes of machine data per day, or a smaller operation that indexes just a couple of gigabytes of machine data per day, nothing is too complex or niche for us.

Our sprawling experience and impressive track record in all-things-Splunk & Cribl means you can rest assured that you'll use data to its fullest potential and get the maximum value from your investment.

### We Handle Data for Major Industries

Financial  
Services

Toll  
Road

Healthcare

Insurance

Communications

Cribl Stream is groundbreaking data engineering technology that allows users to collect, reduce, transform, and route machine data from anywhere, to anywhere.

By using Cribl Stream to reduce, route and shape your data before it gets sent to your data analytics platform, you'll reduce costs, improve performance and control your budget, without compromising on the value you're getting from Splunk or impacting your compliance.

As certified Splunk professionals, we design, install, and implement Splunk environments. From architecture and deployment to custom development and ongoing advisory, we offer outstanding services made possible by our years of experience.

Our unmatched technical expertise guarantees smooth project delivery, and our vast knowledge means you'll get the ongoing and increasing value from your Splunk ecosystem.

#### The result?

You'll be wowed by the insights generated and thrilled with your ability to make data-driven decisions across your business.
